
PROJECT ONE: CLOCK DESIGN

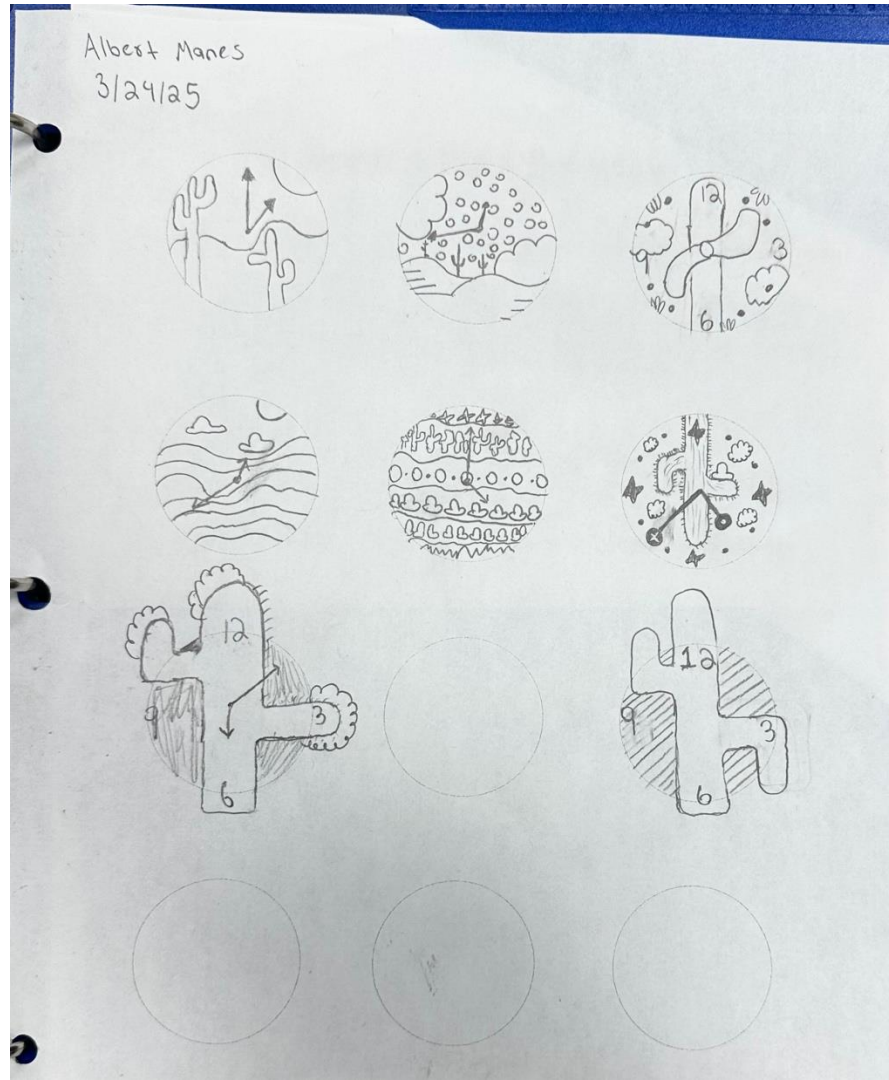

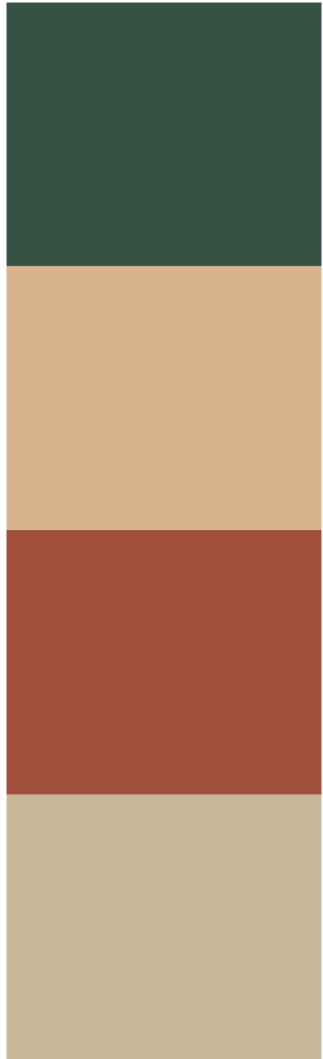

Albert Manes

Using AI to Brainstorm Ideas

- Using the image generator Chat GPT - Dall-E, I started generating design concepts to inspire me.
- Having recently watched Dune, I wanted a desert theme
- Prompt used:
 - “Create a circular design of a abstract sort of desert. I want shapes of cactus and dust clouds. Keep it abstract and simple but not too simple”

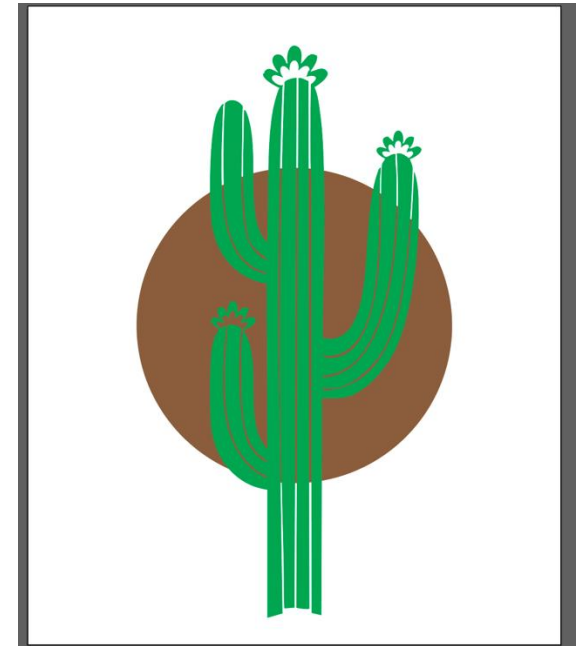

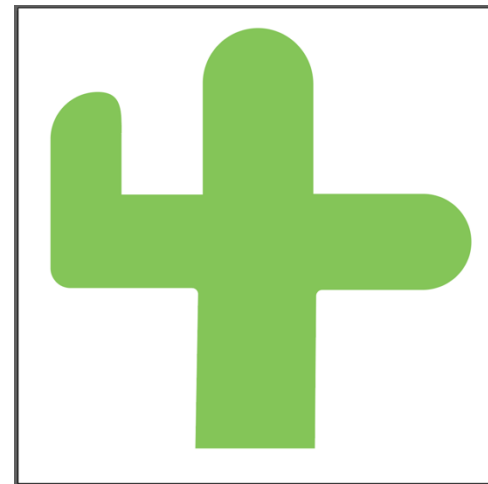

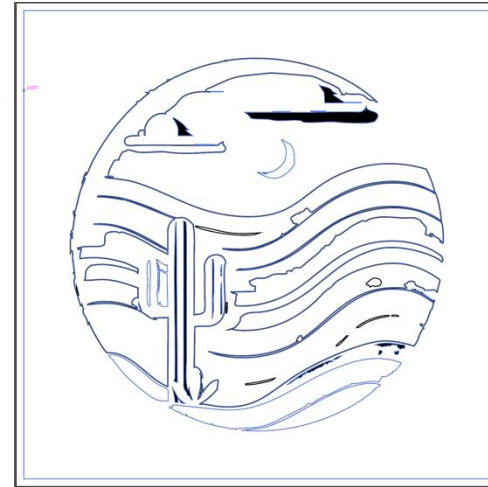

Initial Sketches

- Using the AI images as inspiration I began to sketch some ideas down
- I changed much of what Dall-E generated but it helped with shaping the cactus
- I really liked the idea of the cactus extending beyond the clock (bottom two designs)

Adobe Illustrator Process

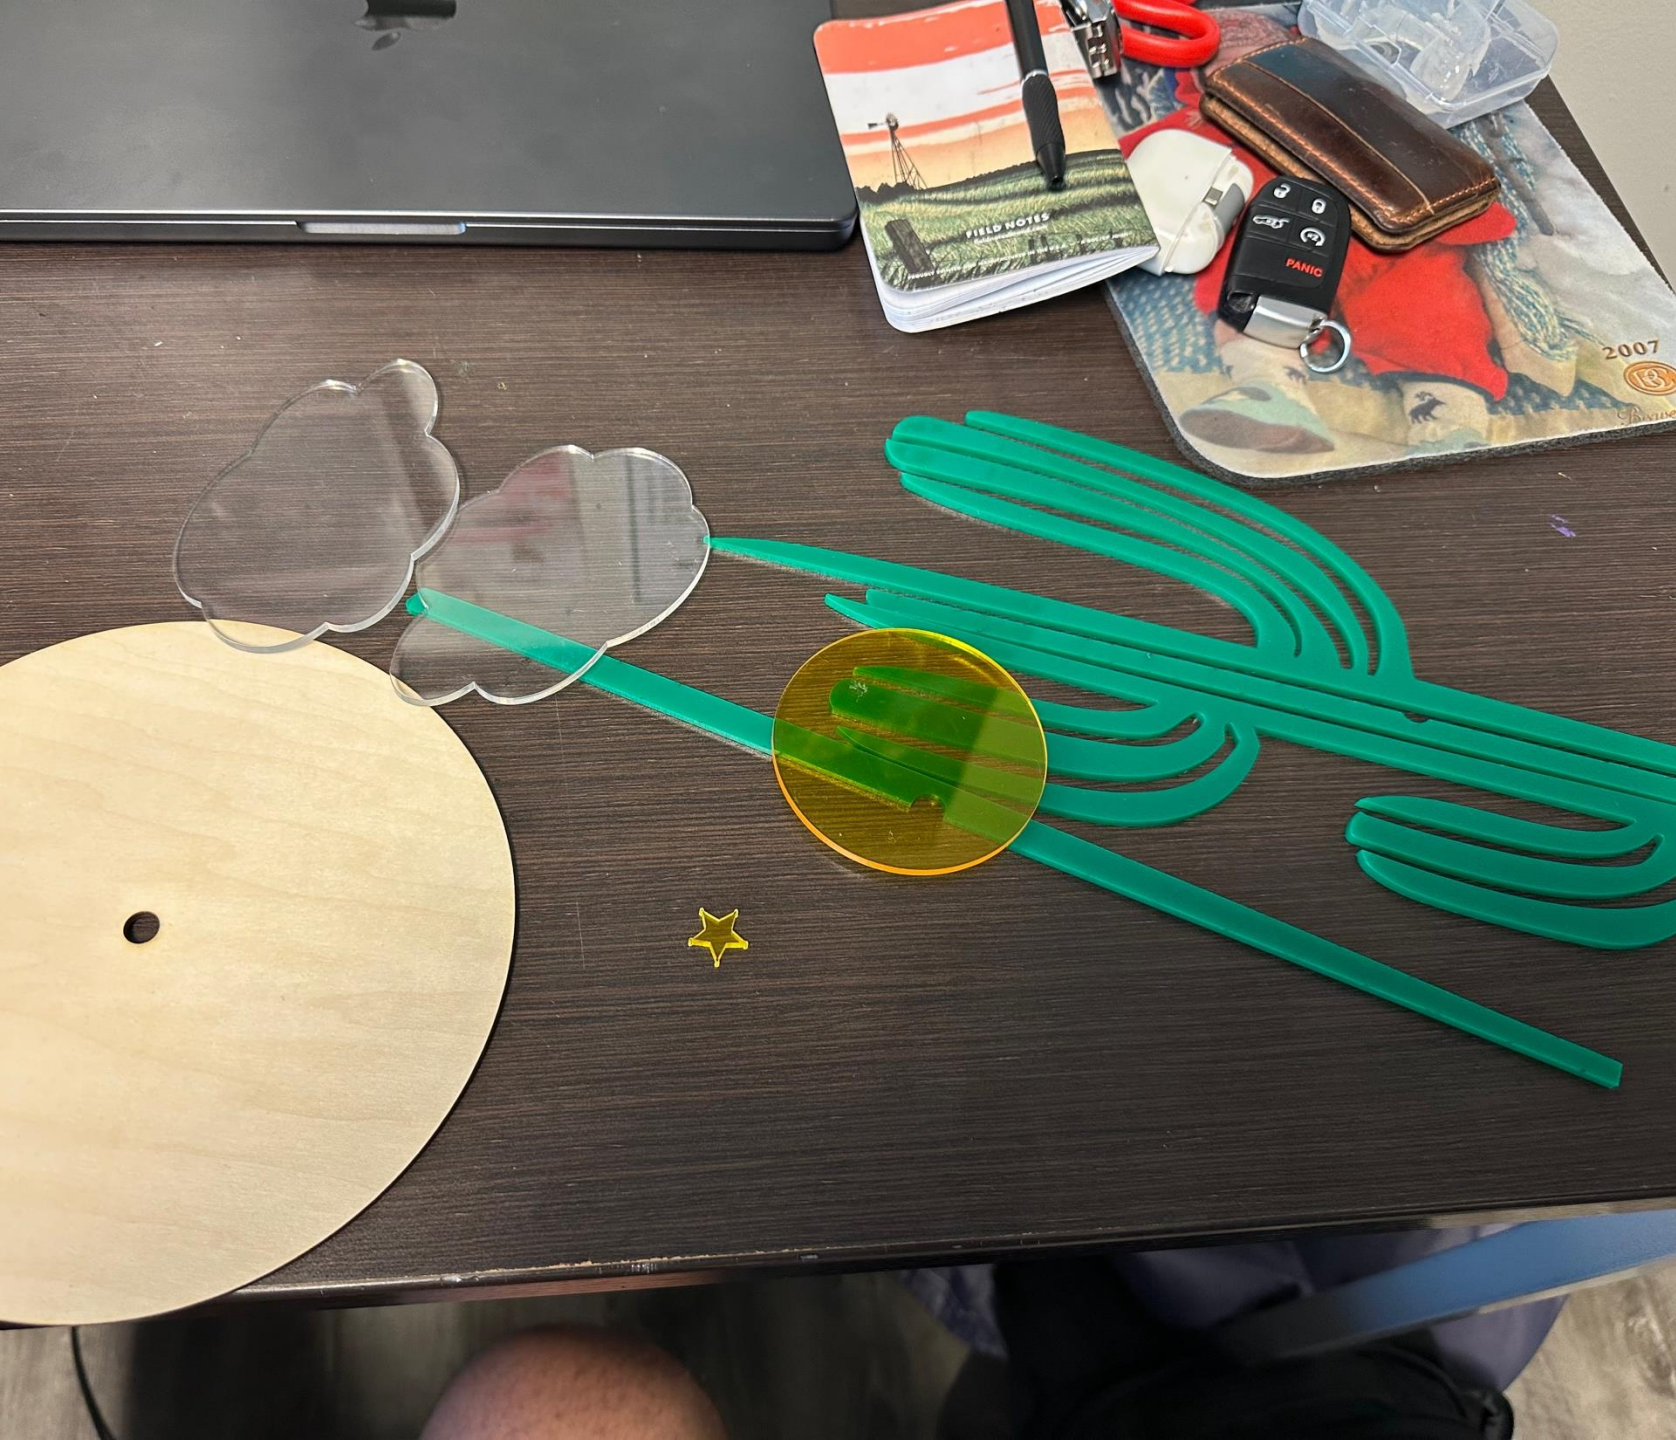

- I initially started with a live trace of the Dall-E generated image (top left). However, I didn't like the results, so I decided to try on my own
- Unfortunately, my cactus (bottom left) did not come out so well...
- Finally, I found a cactus I liked online and live traced that. After some tweaking, I ended up with a cactus I liked (right side).

Final Illustrator File

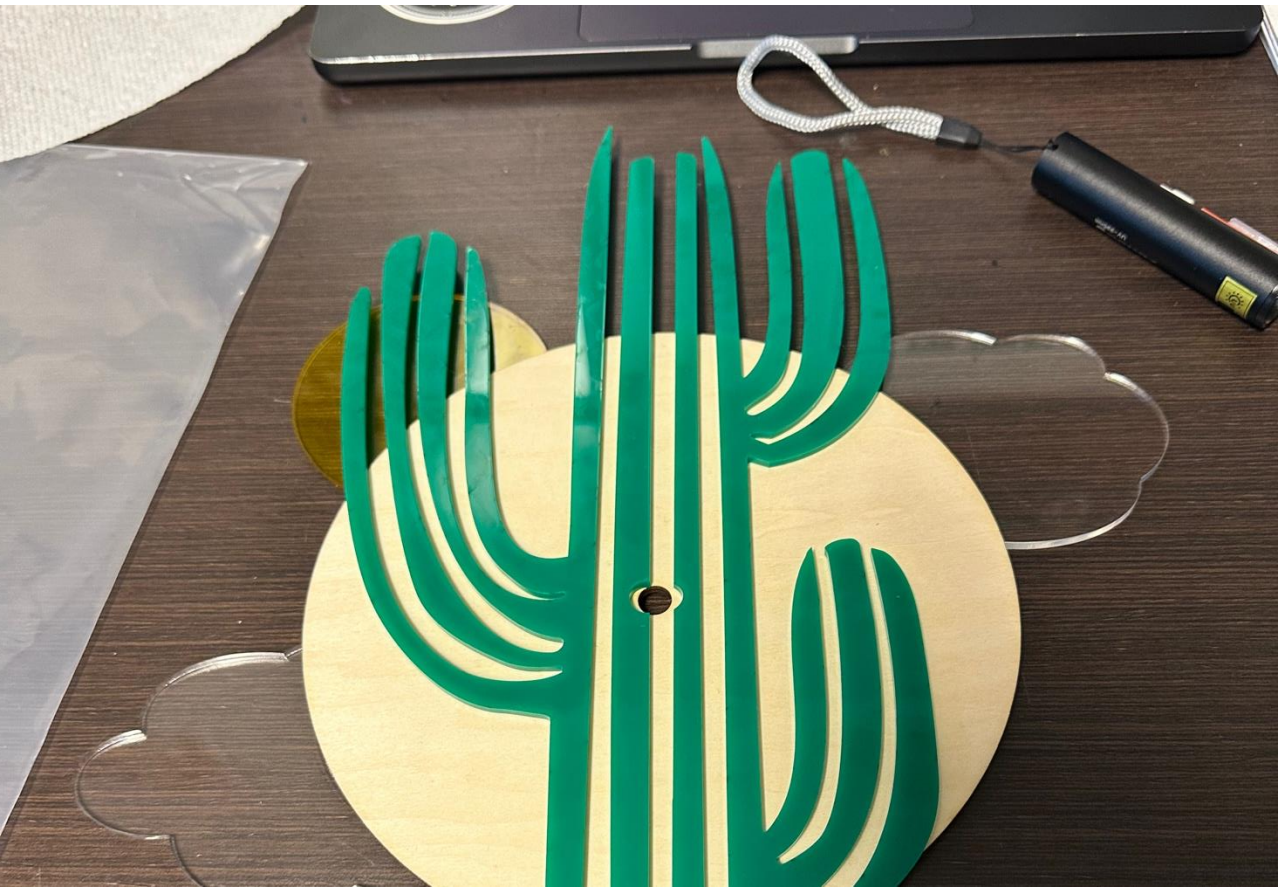

- Just the cactus alone was too simple, so I added some elements to the file.
- This included a sun, clouds and stars to mark the hours.

CUT PARTS

- Final cut parts received!
