

Project 3

Luiza Viola Gervazoni
DSGN 102 64
Spring 23

Final Idea

Everything was based on the Brazilian legend of the Boitatá, a gigantic fire snake that protects the forest from farmers.

THE Sketch

On the left is a study of a snake's head, and on the right, I proceeded to define my project.

I had 3 components...

Components

Nature

Leaves and Dirt
from the
Courtyard

Head

Pink Foam
scraps and a lot
of Hot Glue

Egg

Why do I
complicate my
life

Problem

How can I make an egg out
of acrylic sheets?

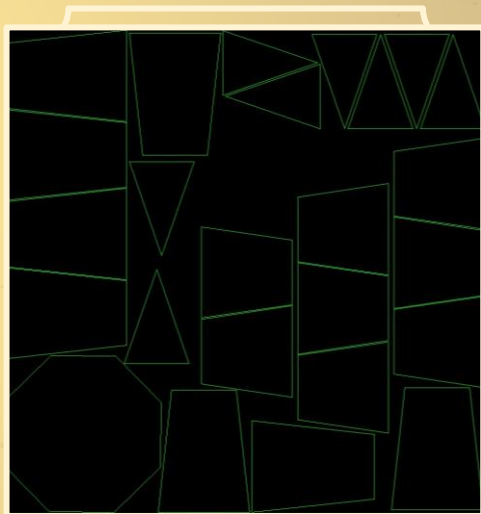

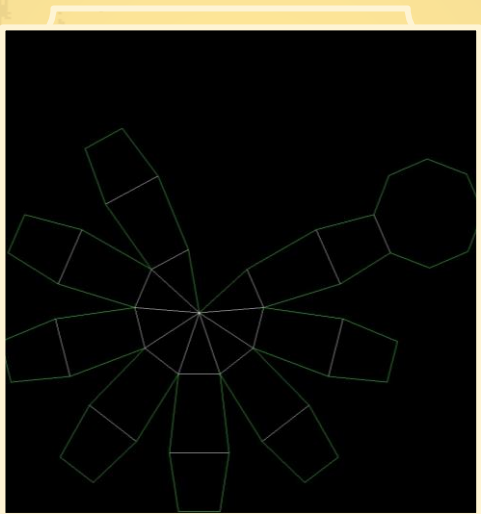

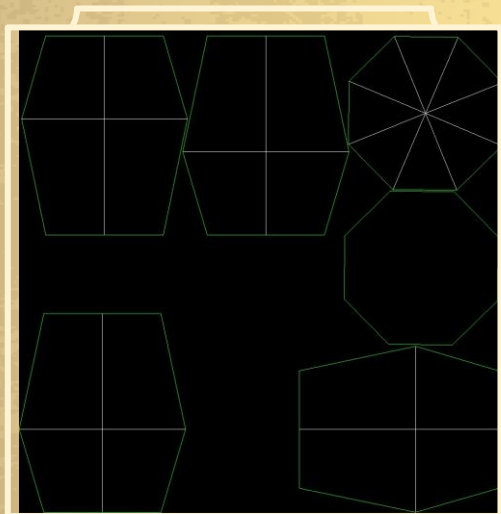

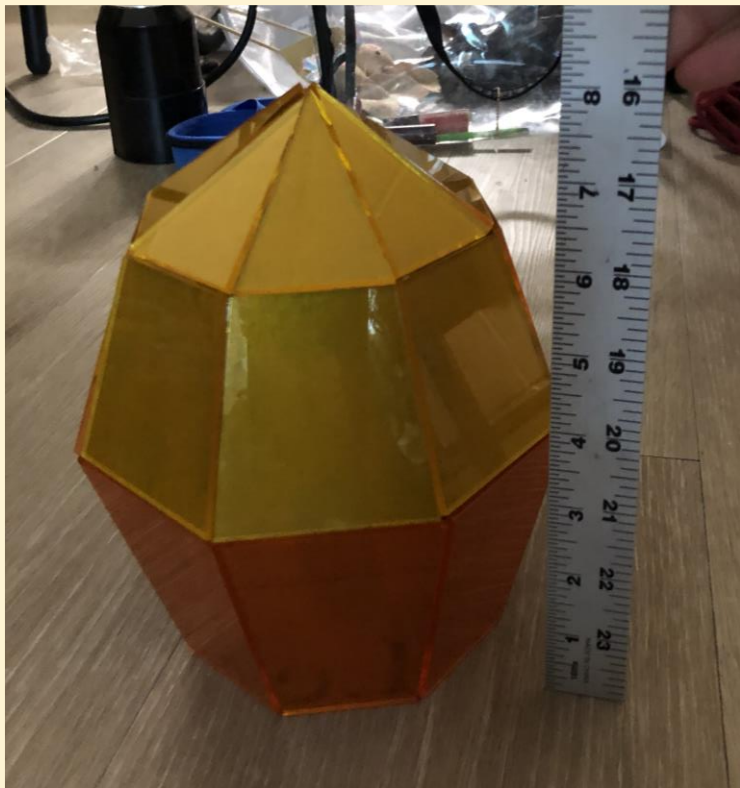

Solution

Spheric Geometry and 3Ds
Max Bitmap!

Trying to find the right mapping...

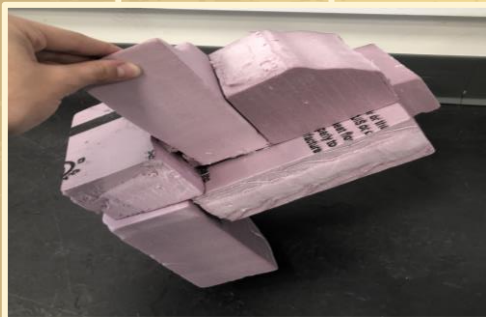

*Only to fail the
measure* ❤️ 😊

... ~ ~ ~
I printed everything but the full
egg was too big for the head, so
I decided to procrastinate
solving this until I carved space
for it on the head.

Head Process

04

Solving the Egg

I picked fractions of the original egg and I could fit 4 parts of it on the head.

Then I sanded it and painted patterns on the inside so that the fairy lights wouldn't be obvious.

.....
Head + $\frac{3}{4}$ Egg

.....
Head + 1 Egg + Dirt

Final Project (On)

Final Project (Off)
